

## Metronet

Get Metronet Fiberoptic Inernet

[1]

PC Computer Guy is very particular when it comes to partnering or officially endorsing companies and products. In our over 15 years of business we only have 4 officially recommended products. This is because we have high standards when it comes to putting our name along side another company. When making such recommendations we look at a number of different factors. The result is that most don't make the cut. Metronet however does!

We have Metronet fiber internet and it's nothing short of absolutely fantastic. We subscribe to the Gigabit internet package, which provides 1000Mb/s download as well as 1000Mb/s upload. This is WAY excessive for what the average household needs. It's like having a private jet for your daily 15 minute commute to work (which then becomes a 1 minute commute). We are often telling people "you are paying for excessive speeds; reduce your internet speeds (and therefore your bill) and save money." So why then do we have such an insanely high speed package? Because Metronet offers great deals. We were able to get ours at \$69/month. For that price, "why not?"

Actual Speed test while writing this article  
[Check to see if you can get these speeds](#) [1]

Metronet offers a variety of packages for internet, TV and phone. Their pricing is very competitive compared to the traditional ATT, Comcast and Spectrum. I can't speak to their TV or phone service as we subscribe to just internet, but we sure do love our internet package. I can upload 700Mb youtube tech-tip clips we create in seconds.

We have had several clients switch to Metronet and all of them have been very happy with the price and speed. If you have metronet available to you (Northern Indianapolis, Carmel, Fishers, Westfield), I would recommend seriously considering making the switch. You can see if Metronet is available (and support PC Computer Guy's tech tips) by using our referral link. [Check Metronet Availability](#) [1], pricing and sign up today - and you'll have the absolute best internet technology can provide with their 100% fiberoptic network - stright to your house. Another perk is that Metronet can improve wireless coverage throughout your house with Mesh Wifi. I have been to a couple clients that switched to metronet based on our recommendations, and when I inspected the install - I found they installed eero Mesh Wif units for the client - allowing for great wifi speed and coverage throughout the house. Mesh wifi is vastly superior to internet repeaters.

Another nice thing for some people is the ability to tell their existing ISP "bye-bye". Many of us have had bad interactions, or frustrating and useless support from the existing monolithic companies. They are willing to provide such bad service because they know for 99% of the population, you have little to no alternatives. With this lack of competition, it sadly feels like these companies take advantage of that fact and we are stuck with sub-par, expensive "service." Those who have metronet available, no longer do you have to just deal with it.

I want to be clear; our recommendation does NOT come from the fact that we get referral bonus. Our integrity is more important than that. It comes from the fact that you get absolutely amazing speeds for far less than the alternatives and for us the reliability has been great as well.

So what do you have to loose? [Check to see if you can hop on Metronet's fiber-optic network and save some money while you are at it](#) [1]!
