

Speed Test

Speed Test

Is your computer or Internet running slow? This is a commonly misunderstood question.

Slow Computer + Fast Internet = Slow Experience

(Why?: Computer cannot process the incoming data fast enough)

Fast Computer + Slow Internet = Slow Experience

(Why?: Internet cannot deliver data fast enough).

Fast computer + Fast Internet = Fast Experience.

You are only as good as your weakest link. Below is a speedtest you can run to determine if there are any network speed issues. Speed results are dependent on your connection and purchased package. However Anything less than 3Mb is too slow, and should really be 6Mb or higher. If you are on DSL still - it's time to retire that and upgrade to UVerse (basically DSL version 2.0) or Cable. Test your speed: www.speedtest.net [1]
