# Websites

Custom & Affordable Websites by PcCG

Websites are built using Drupal or WordPress. Because these CMS's are powered by PHP and mySQL, CSS, JAVA and HTML5, websites become dynamic - giving you the power to easily update content any time, and fresh content means a living website - which then elevates rankings.

With PcComputerGuy websites you can log in, make changes or add new content from anywhere, at any time. There is no requirement to contact us any time you want to make a change, which can keep costs down in the long run. Of course if you want us to manage your entire site and content for you, we're happy to provide the service as well!

Sites designed by PcComputerGuy go beyond what many others offer. Along with making your site SEO friendly we engineer and monitor the site with security in mind; always working to keep the hackers out!

PcComptuerGuy is your best choice for implementing or upgrading your website. We can also setup professional looking email with your own domain using IMAP or Exchange to syncronize your email across all your devices.

Our server is FAST! We can also provide hosting services for your website via our dedicated VPS (virtual private server) using Solid State Drives and dedicated RAM, which offers speeds significantly faster than possible through discounted shared hosting services. Managed by PC Computer Guy our server runs on the latest Linux-based software providing excellent up-time and security.

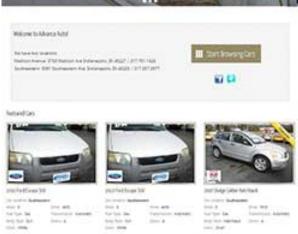

That's right: 91% Faster than all tested websites!
